

**David Myers**  
**Palm Beach, Florida**  
**Advisor: Jack Calcut**

I grew up in Florida, but went to high school in Massachusetts. I started Oberlin with a focus in philosophy, but quickly switched to math to take advantage of the greater creative freedom it offered me. I have done research in analogy making at the Oberlin Psychology department, and an REU in cryptographic protocol analysis. My main focus and mathematical love is category theory, which is the abstract algebra of process. I am doing my honors project in formal category theory, coming up with a graphical notation that can be used to quickly and intuitively calculate in this austere axiomatic environment. Apart from math, I write poetry and terrible anti-folk songs.
